

AiLunaPro — Application Map

AiLunaPro — Application Map (factual inventory)

Generated 2026-06-07. Source of truth: `src/types/audit.ts` Route union, `src/data/mockDashboard.ts` nav, `public/static pages`, `worker/src/routes/*`. Factual inventory — no roadmap, no assumptions.

Legend:  public (no login) ·  authenticated member ·  owner/admin (or platform-admin for Operator)

1) Entry points

A. Public — no login

Static marketing/SEO pages (Cloudflare Pages, separate from the SPA):

Name	URL	Purpose	Auth
Audit Express (demo)	<code>/audit-express</code>	Anonymous tap-based AI-readiness demo + ROI	
EU AI Act	<code>/eu-ai-act</code>	SEO / info page	
FAQ	<code>/faq</code>	SEO / info	
Méthodologie	<code>/methodologie</code>	SEO / info	
Pricing	<code>/pricing</code>	SEO / pricing	
Shadow AI	<code>/shadow-ai</code>	SEO / info	
Use cases	<code>/use-cases</code>	SEO / info	

Public worker APIs (consumed by the static pages / share links):

Route	Purpose	Auth
<code>POST /api/public/audit-express/{config,preview,extract,pdf}</code>	Anonymous Audit Express (Turnstile-gated)	
<code>POST /api/public/diagnostic</code> · <code>POST /api/public/roi-calculation</code>	Public diagnostic / ROI compute	
<code>GET /api/public/fx</code> · <code>GET /api/public/geo</code>	Currency / geo helpers	

Route	Purpose	Auth
GET /api/audit-express/shared/:token	Shared Audit Express PDF (HMAC, no login)	
GET /api/reports/shared/:token	Shared Report PDF (HMAC, no login)	

SPA auth pages (public):

Name	Route	Purpose	Auth
Login	#/login	Sign in	
Signup	#/signup	Create account	
Forgot password	#/forgot-password	Reset password	
Create org	#/org/create	First workspace	 (post-signup)
Accept invite	#/accept-invite	Join workspace	 (tokened)

B. Authenticated SPA routes (hash routing #/...)

Name	Route	Purpose	Auth
Dashboard	#/dashboard	KPI overview	
New Audit	#/audit/new	Start questionnaire audit	
Audit result	#/audit/result	Computed audit result	
Audit assistance	#/audit/assistance	Action/recommendation plan for an audit	
Audit history	#/audit/history	Past audits	
Reports	#/reports	List of report snapshots	
Report detail	#/reports/detail/:id	View report + Download PDF + Rename + Sharing card	 (rename/share )
Report share (in-app)	#/reports/share/:id	In-app read-only view (same workspace)	
AI Registry	#/registry	Inventory of AI tools	
Agents	#/agents	Agent catalog + recommend panel	
Agent detail	#/agents/detail/:id	One agent	
Run Audit Express	#/audit-express/run	In-app Audit Express	
Saved Audits	#/audit-express/saved	Saved Audit Express list	
Saved Audit detail	#/audit-express/detail/:id	Detail + PDF + rename + share lifecycle +	 (mutations )

Name	Route	Purpose	Auth
		recommended agents	
Diagnostic	<code>#/diagnostic</code>	Diagnostic engine view	 (route exists; not in primary sidebar nav)
ROI Calculator	<code>#/roi-calculator</code>	ROI compute	 (not in primary nav)
System Builder	<code>#/system-builder</code>	Guided setup	 (not in primary nav)
Team	<code>#/team</code>	Members / invites	 (manage )
Settings — Profile	<code>#/settings/profile</code>	User profile	
Settings — Org	<code>#/settings/org</code>	Org settings	
Settings — Preferences	<code>#/settings/preferences</code>	Preferences	
Settings — Billing	<code>#/settings/billing</code> · <code>#/billing</code> · <code>#/billing/success</code>	Stripe billing	
Buy tokens	<code>#/billing/tokens</code>	Token packs	 / 
Help	<code>#/help</code>	Help center	
Operator console	<code>#/operator</code>	Platform admin	 platform-admin allowlist

C. Primary sidebar nav (the visible menu)

Dashboard · New Audit · Reports · Audit history · **Run Audit Express** · **Saved Audits** · AI Registry · Agents · Team · Settings · Billing · Help.

(Diagnostic, ROI Calculator, System Builder, Operator are routable but not in this sidebar list.)

2) Feature → where it lives

Feature	Entry point(s)
Audit Express	Public demo <code>/audit-express</code> ; in-app <code>#/audit-express/run</code> ; list <code>#/audit-express/saved</code> ; detail <code>#/audit-express/detail/:id</code> ; worker <code>/api/(public/)audit-express/*</code>
Reports (from New Audit)	<code>#/audit/new</code> → submit → <code>#/reports</code> → <code>#/reports/detail/:id</code> ; worker <code>/api/reports/{detail,file,title,share,...}</code>
Sharing	Audit Express: detail share card → <code>/api/audit-express/{share,...,shared/:token}</code> . Reports: detail share card → <code>/api/reports/{share,...,shared/:token}</code> . Plus in-app <code>#/reports/share/:id</code>

Feature	Entry point(s)
PDF generation	Audit Express PDF (worker, deterministic) via Saved/Run detail "Download PDF"; Report PDF (worker, deterministic) via <code>#/reports/detail</code> "Download PDF"; public PDFs via shared links
Recommendations	Agents catalog <code>#/agents</code> + RecommendPanel; "Recommended agents" card on Saved Audit detail; worker <code>/api/recommend</code> , <code>/api/agents</code>
Assistant-like behavior	<code>#/audit/assistance</code> (static action/recommendation plan) · <code>AudioExplanation</code> (browser TTS narration of a report) · Audit Express "understanding" (rule-based). No conversational copilot.

3) "Luna AI Copilot" — explicit answer

No. There is **no distinct feature, route, or UI** named "Luna AI Copilot."

- The only occurrence of "Luna AI" is a **marketing tagline**: `CTABlock.tsx` → "🌟 *Powered by Luna AI*". The words "copilot" / "assistant" elsewhere are only **example data** (registry tool names, a questionnaire option, Audit Express opportunity titles like "support assistant") — not a product feature.

Existing features that partially cover the concept:

- `#/audit/assistance` — a generated **action plan** (static, rule-based; not conversational).
- Agents catalog + `/api/recommend` — **recommends** AI agents from a profile.
- `AudioExplanation` — **narrates** a report via browser speech (one-way TTS).
- Audit Express "understanding" — rule-based interpretation of a crawled site.

What's missing for it to be a real, explicit Copilot: a dedicated route/UI; a conversational/interactive surface; the ability to take a user request and act/answer across the product; and (if intended) an LLM — which the codebase currently does **not** use anywhere (all engines are deterministic / rule-based).

4) Gap summary

- **Exists today:** questionnaire Audits → Reports (detail, premium PDF, rename, full share lifecycle); Audit Express (public + in-app, save, detail, PDF, share lifecycle, recommended agents); AI Registry; Agents catalog + recommendations; Diagnostic / ROI / System Builder routes; Team / Settings / Billing (Stripe); Operator console; public SEO pages; deterministic hand-rolled PDFs; HMAC public sharing for both Audit Express and Reports.
- **Never implemented:** any "Luna AI Copilot" feature; document/file upload → analysis (confirmed net-new); any LLM-based behavior.
- **Only implicit / conceptual:** "Luna AI" as a brand tagline; "assistant/copilot" as example data and agent categories — not shipped product surfaces.
- **Would require a new epic:** (a) an explicit **Luna AI Copilot** (conversational/assistant surface — and a decision on LLM vs rule-based); (b) **Document upload** → **audit**. Both are net-new, gated.

Waiting for your confirmation on what is missing or should be formalized.
